NEXTPHASE

We empower your business

TO MAINTAIN TRUSTED ACTIONABLE CLOUD DATA!

About NextPhase

NextPhase is a Data Cloud service provider enabling enterprises to monetize their data with improved Data Quality and Data Governance. We integrate data management expertise, technology automation and cloud operations processes to deliver a cohesive Data Operations service. Our multi cloud services portfolio works for data cloud solutions with Snowflake, Hadoop, AWS S3, Redshift, GCP and Azure. We provide our clients flexibility to include data integration technologies of their choice with a standardized service delivery infrastructure.

Data Management Services Portfolio:

Data Value Creation Services:

- Data Discovery
- Data Mapping and Lineage
- Data Modeling
- Data Policy Development

Data Ingestion and Validation Services:

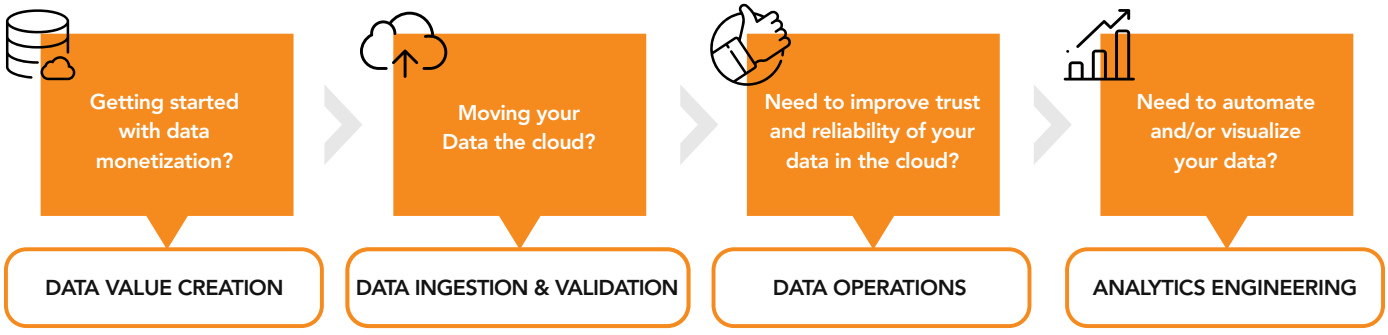
- Data Pipeline Automation
- Data Validation
- Data Cleansing
- Audit Logging

Data Code Refactoring and Transformation Services:

- Rationalization of current data extracts and processing logic
- Modernizing code at the target cloud destination
- Functional code optimization and protection
- Automated testing and validation

Data Operations Services:

- Data Pipeline Observability
- Incident Management
- Change Tracking
- Testing Automation



We help you build a Data Cloud Roadmap

We help automate pipeline creation, data ingestion and data manipulation as the data moves

We help you with Data Operations services for data quality and data governance

We help you develop insight and analytics from your data

Key Features:

Security - Data Pipelines are fully integrated with services for Access Controls, Data Anonymization and Segregation of Duties to protect your data

Compliance - Our Data Governance service elements supports your Regulatory Compliance requirements with an inherent design for segregation of duties and functional firewalls between Change Creation and Code Promotion

Economics - Eliminate Data Debt by avoiding investments in specialist resources, tools, and process to develop a Data Operations infrastructure

Reliability - Operational process driven by combining software orchestration with SOP's and a shared services structure delivers consistency and predictability for DataOps

Flexibility - Our flexible service delivery structure can adopt a mix of technology solutions. Your choice of Data Integration tools can be plugged in to service delivery framework to attain the desired business outcomes.

Challenges we solve:

Optimize use of your internal data management experts. Instead of burdening your valuable Data Engineers and Data Scientists with operational tasks, we handle the mundane activities while you keep your resources focused on making your business different

Eliminate the unexpected. To avoid unplanned delays due to code conflicts and code commit errors, our Data Operations process will notify your stakeholders of key changes that may impact their code. Gives them a chance to proactively address changes before they get impacted

Constrained due to limited IT support for your data transformation initiatives. We can seamlessly expand your Data Management team with our flexible resourcing model that aligns with your budget and requirements

Risk compliance and audit findings due to inadequate Segregation of Duties. Our services model is designed to inherently provide you with checks and balances model that meets Industry Compliance requirements

Daily complexities and incur Data Debt. Minimize your investment and maintenance for a specialized Data Operations function. Hire a Data Management specialist provider so you don't have to manage the daily complexities

> NextPhase is uniquely qualified to deliver flexible Data Operations Services tailored to meet your enterprise data management objectives. Let's get started!
